

GOAL: Compute derivatives of derivatives. Interpret the second and third derivative in a physics context.

Summary:

$$\frac{d^n f}{dx^n} = \frac{d}{dx} \left(\frac{d^{n-1} f}{dx^{n-1}} \right) \quad f^{(n)}(x) = [f^{(n-1)}(x)]'$$
$$a(t) = v'(t) = s''(t) \quad j(t) = a'(t) = v''(t) = s'''(t)$$
